

Big Foot Metal Systems is a privately owned non-union company that has been in business for over 30 years.

It has built a strong reputation in the oil and gas, agriculture and residential industry for its quality of product, workmanship, and the ability to conform to meet the specific needs of the individual business. We rely on the oil and gas industry for about 80% of our business, while the agricultural and residential areas are 10% each.

We have a shop crew of 5 employees to manufacture urethane foam panel buildings, self-frame metal buildings, and insulated panels which are used for making utilidor for pipe runs, tank panels, and boxes. A moderate inventory of metal and related materials, which are used to manufacture products for our customers and their specifications, enable the company to provide quick and quality service. We also manufacture walk doors for our buildings and are able to modify from standard door sizes.

We have building crews of 4 employees to install buildings, utilidor, and overhead doors. We also have a crew of 4 employees to install pipe insulation and a variety of pipe covering. Due to the variety of sizes, pipe insulation inventory is kept at a minimum level and ordered as required by the customer. We also work in the maintenance sector by making required repairs to existing buildings, pipe insulation and if requested demolition of older buildings.

Big Foot Metal Systems strives to remain competitive in its business sectors and welcomes new and innovative ideas from employees and clients.
